# Welcome to Tupakan AuGreen whitepaper.

To guide you through our goals, strategies, and vision we must first clarify that our whitepaper is by no means an official contract and therefore subject to change depending on shifts in the market, the world, and the project itself.

This document's purpose is providing you with the core information regarding the project, tokenomics, the blockchain it's connected to, purpose, usability, and an overview of the real-life assets connected to it.

Keep in mind there will be consistent updates on projects connected to the fund.

## ABSTRACT

Tupan AuGreen is a Security token based on ForestAu green investment fund, with the purpose of investing in socio-environmental projects to generate Environmental Credits, for companies to comply with the UN 17 SDGs (Sustainable Development Goals) and regenerate the world with truly cyclical and sustainable measures. **The token is also an asset, with its value based on the profit, and impact made by ForestAu's projects on the world.**

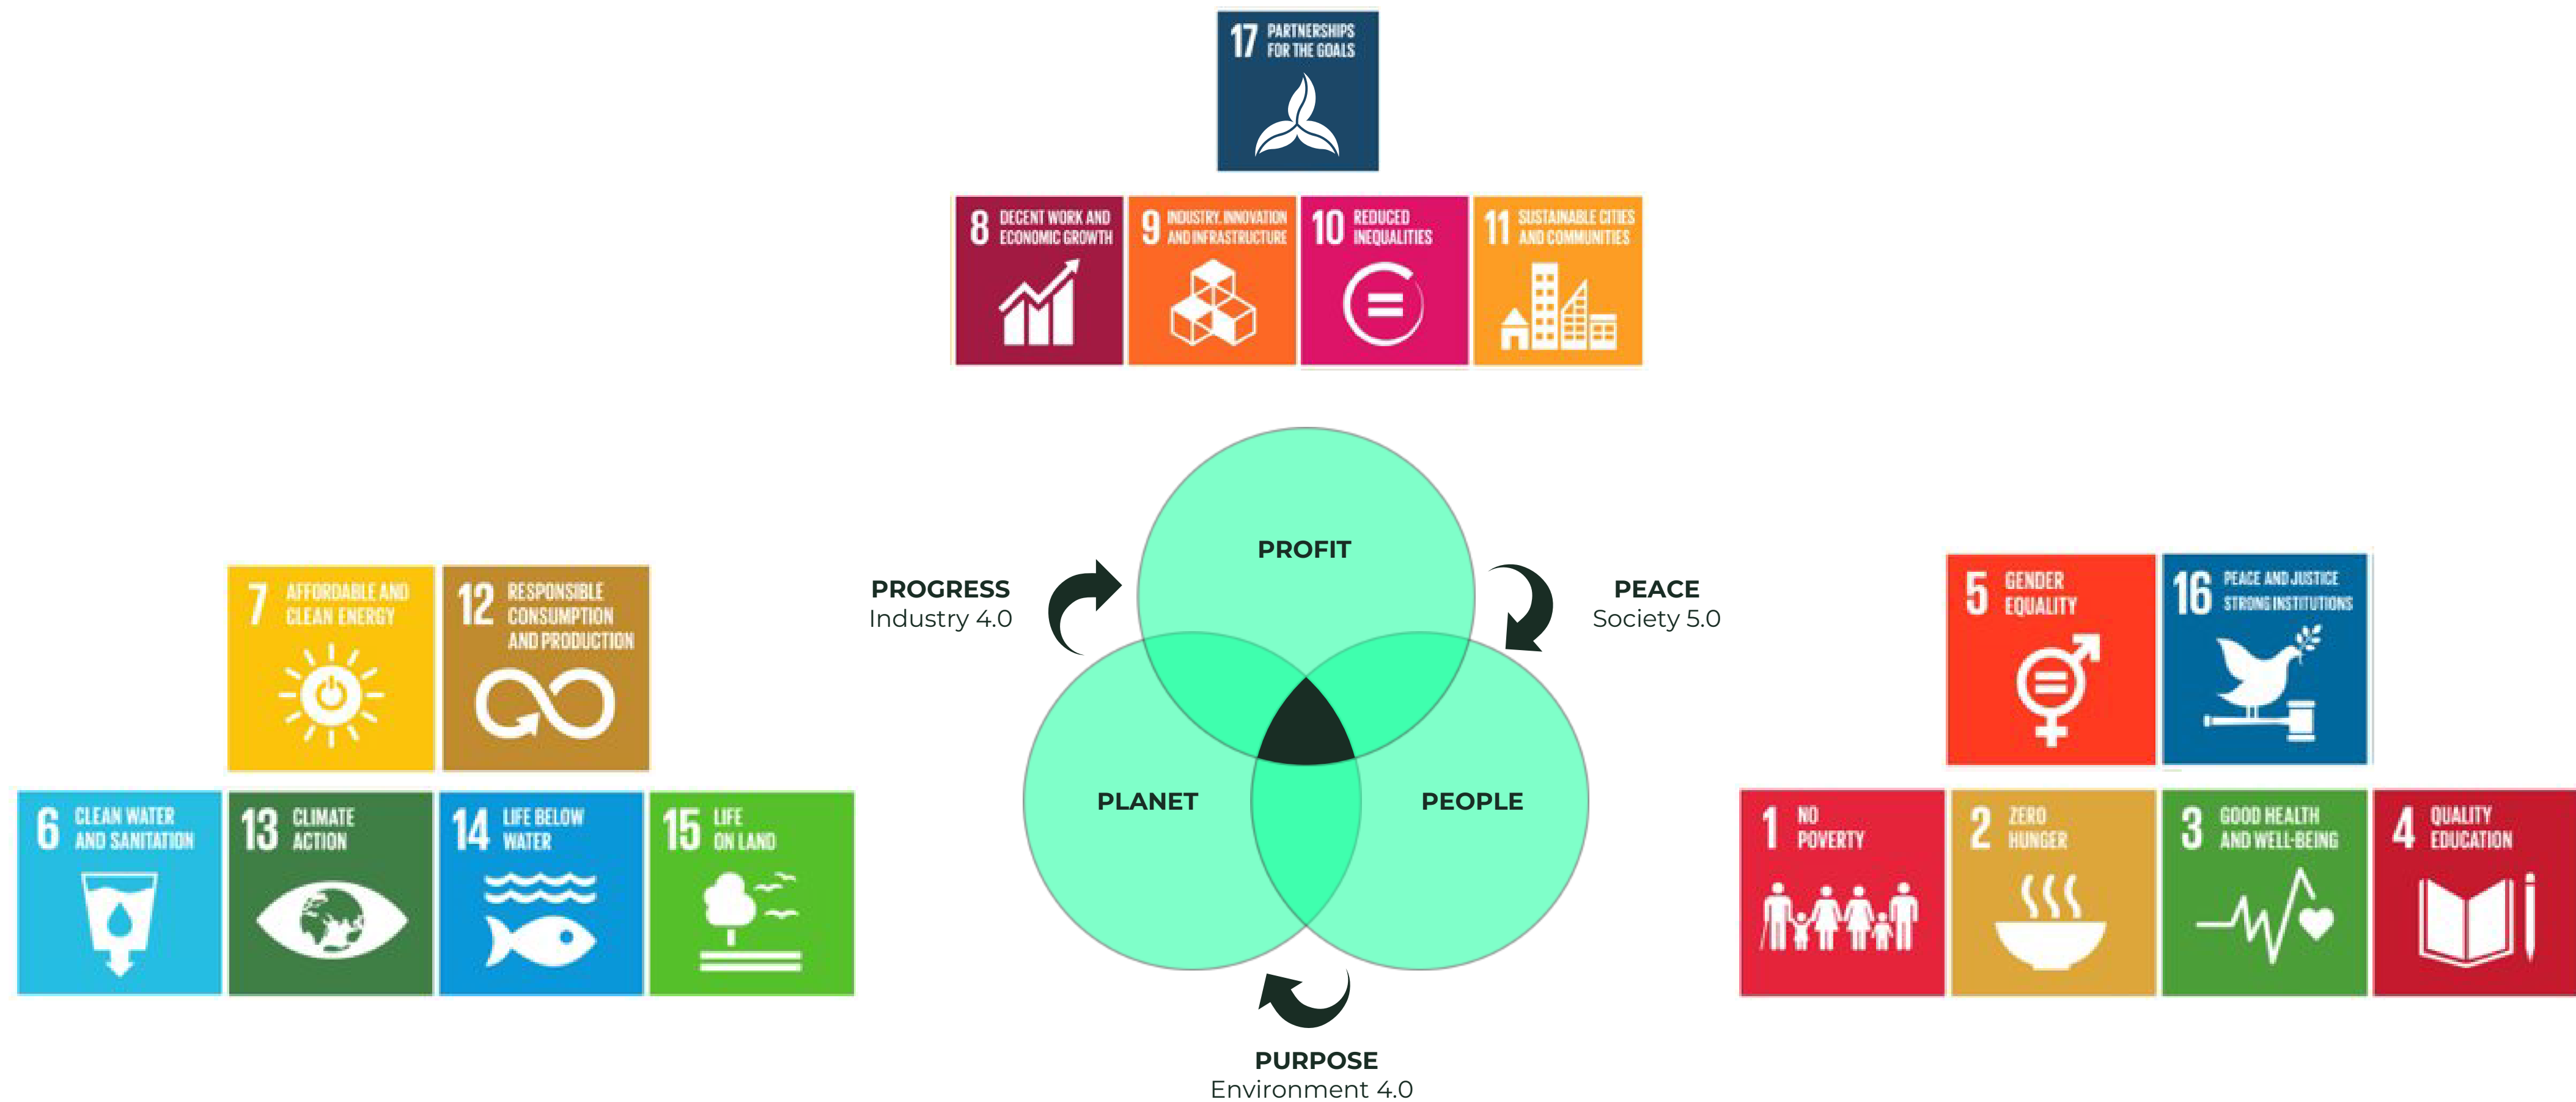

## INTRODUCTION

Forestau Green LLC is a green investment fund created out of the realization that the planet not only claims for urgent aid, but the market for socio-economical and environmental damage offset projects offers great profit potential as well as longevity for humankind in the next decades. Only recently has society realized the need for conscious and cyclical use of our natural resources, but a common misconception is separating profitability and sustainability as polar opposites, when in reality the ESG market and environmental projects are highly profitable if executed with expertise and a clear vision.

One of the methods widely adopted by companies to offset the damage done to the environment is the Carbon Offset, or Carbon Credits. ForestAu has an operation of selected Native Amazon Rainforest land for carbon capture certified by organizations such as Verra and Gold standard, offering these carbon credits to the B2B market and connecting it to the crypto realm by accepting payment for those certificates in TCT (Tupan Community Token).

Carbon Credits are one of the first tools used for environmental awareness, as it is one of the first methodologies to quantify how much a company has been able to offset from their emissions, and although it is a staple and a step towards the sustainable development goals established by the United Nations, it doesn't have same impact on other SDGs as it only tackles the climate action goal.

To take impact investments further, society needs to re-evaluate their view on ESG and what actions will positively impact the environment and communities as a whole. That's where ForestAu's planning and vision will indulge investors and activists, with objective yet disruptive solutions to the century's most concerning issue.

# OUR MISSION

Taking the core principles of the SDGs into account, ForestAu realized only CO2 certificates would limit the scope and reach of the potential for technological, economical, and environmentally-friendly advancements that could aid locals, provide them with food, create job opportunities, fomenting the economy while applying circular bio-economy into the production guidelines of these projects.

The insertion of these pro bio-economy working guidelines are not limited to climate change, they can change entire local work cultures, showing the community that using resources responsibly can be even more profitable and impacting many other aspects of regeneration, such as **responsible consumption and production, life below water, and life on land.**

To be able to reach all 17 SDGs, many aspects of environmental impact must be taken into consideration. From the basic necessities such as clean water and nourishment, to a decent working environment, sustainable economic growth, infrastructure and technological innovation. ForestAu takes the aforementioned guidelines and directs its projects cover not only one, but all of the goals.

With proper prioritization to ensure there is a solid base to be able to progress from objective to objective, having a clear view of the end goal, and certifying investors with Environmental Credits.

**Source: [sdgs.un.org](https://sdgs.un.org)**

Environmental Credits certify the true ESG, as they'll be measuring environmental, economical and social aspects of projects, instead of being limited to emissions only. Another concern looming around environmental themed companies as well as regular companies offsetting their carbon footprints alike, is what the community calls greenwashing, which is a term used for companies and/or projects that boast sustainability while marketing their products, while in reality making little to no impact on the environment.

The main issue is diferenciating companies that truly aim to impact the environment and help the cause, from the ones using the ESG narrative to have the approval of society in order to sell their products with a green label on them. The Environmental Credit's purpose is to broaden the criteria from only offsetting, to many more aspects of environmental impact based on the development goals.

Having Tupan AuGreen and environmental credits is owning an asset certifying participation in projects that truly embrace the regeneration and advancement of technology used for both providing much needed support for circular bio-economy, and for many more purposes out of the "only green" realm, adding value to Tupan AuGreen.

**Greenwashing source: [earth.org](https://earth.org)**

To ensure absolute transparency and security ForestAu is regulated by the SEC (US Security Exchange Commission) which is a regulatory organization that enforces security laws to guarantee fair dealing and a reliable investment experience, making Tupan AuGreen the first token (and for a while, was the only one) with assets regulated by SEC USA based on the investment Fund.

## THE ESG IN THE MARKET

There must be an analysis of data and projections to elucidate the current size of the market, versus the potential for growth of ESG-based investments to understand the position society is on the matter, and what realistically we can achieve, to clarify that investments in the segment are beneficial to both our planet and our economy.

As previously stated ESG investments being an obligation rather than a profitable option is a stigma of the past. A pool conducted by Domini impact investments discovered that 8 out of 10 investors will add an ESG investment to their portfolio, with millennials being the most dominant with a 93% likelihood of investing in the area. 50% of the participants stated that they would even be willing to sacrifice investment performance to comply with SDG goals, but given the stable growth indicators, that won't be necessary.

# Who Wants to Make an Impact?

Interest in ESG is high overall

**More than 4 out of 10 investors have previously invested based on ESG issues.**

**Nearly 8 in 10 investors will add sustainable investments to their portfolio in the next two years.**

According to the report found on “The Future Of ESG Investing” by Adam Green over Forbes states that not only the climate change is one of the biggest challenges of this decade, but ESG funds doubled from 2020 to 2021. As stated ESG funds are 77% more likely to survive for periods longer than 10 years compared to 46% of traditional funds that lasted that long, so not only have funds doubled in a little less than a year but these funds tend to have more longevity in the market.

**Source: forbes.com**

In 2021 ESG mutual funds, ETFs, institutional mandates, and private funds are on track to grow from \$8 trillion to \$30 Trillion by the end of this decade only, according to research conducted by Broadridge, and the projection for its assets is to reach 50 trillion by 2025 according to Bloomberg. Even after delicate economical times with the COVID-19 pandemic, investors understand not only the potential the market has but the impact the investment has on the environment as a whole and how necessary it is.

- M Millennials
- X Gen Xers
- B Baby Boomers

# Total Retail and Institutional ESG AUM Forecasts to 2030 \$trn

Source: [broadridge.com](https://www.broadridge.com)

[bloomberg.com](https://www.bloomberg.com)

Broadridge Global Market Intelligence also states that Europe had more than a 100% of the ESG flow and 62% of the international market flow. In addition, thematic equity funds captured \$303 billion in net inflows in 2021 65% of that number directed to ESG products, a number 10 times greater than in 2019.

Naturally, every business and/or segment is bound to bear markets, but investors statistically have been increasingly aware of ESG practices within companies they invest in. Based on all research mentioned above, these practices are a determining factor in whether to invest or not in an asset and are currently no longer an option when an investment analysis is made. That said, we can assertively confirm this is shaping up to be a change in the investment culture, where circular bio-economy is not a trend but a core part of every business taking itself seriously.

# FORESTAU GREEN PROJECTS

For projects to be taken under ForestAu's custody, our specialist team analyses all aspects of the prospect to check if it meets the requirements to be a part of the fund's portfolio.

**Compliance with ESG Guidelines:** Taking the 17 SDGs as parameters, the assessment is made on how many aspects the prospect can impact to allow it to advance into the next phase of analysis. Projects considered regular investments or "business as usual" are excluded from further analysis as the only entryway to ForestAu's portfolio is a level of compliance with SDG guidelines.

Once the prospect has its contributions to the ESG assessed, it's advanced into the financial viability analysis, vital to understand if the said project is economically prosperous.

## Compliance with ESG guidelines

A Clear Analysis System is necessary to reach the high standards necessary for its projects to grow and develop, ForestAu aims to be acknowledged by the UN and the rest of the world as the 17th SDG for its innovative approach to impact investing. Projectwise the goal is investing in around 100 projects worth 2 Billion dollars, thirty businesses in its portfolio, 200 Billion dollars under management in the next 8 to 10 years, and ranking among the top direct impact investing funds.

## DeFi

Decentralized Finance or DeFi is a concept conceived around 2014, with its first core elements and directives emerging from the Ethereum Blockchain. The main goal of decentralization is to provide investors the option of having their assets within an immutable environment devoid of intermediaries or banks. This secure environment is made possible by blockchain technology, using algorithms and smart contracts to contribute to the autonomy and independence of its users without compromising their assets.

The Securities and Exchange Commission (SEC) and Federal Reserve set the rules for centralized financial institutions such as banks and brokerages in the U.S., where customers go to directly access capital and financial services. While DeFi is new, SEC does have rulemaking authority over it, ForestAu Green and by extension Tupan AuGreen token comply fully with their guidelines to ensure fair trading and secure transactions.

Embracing independence from a centralized financial model, ForestAu has its tokenized assets running on a truly DeFi Blockchain, providing trading freedom as well as assuring investors of the company's legitimate business practices by having the fund and tokens regulated under SEC rulings.

**Source: sec.gov**

## How to do transactions in Eav7 work?

When a miner (virtual machine) receives a fund from the other side, the Blockchain is programmed to perform only one function: Receive and deliver, correcting a recurring problem of traditional blockchains in which miners get corrupted and do not deliver. Each virtual machine can communicate and bring data to the miner. When downloaded and installed, the app will communicate directly with our mainframe and how to operate on our Blockchain. We supply means for it to acquire precise knowledge of how each element performs and what it requires, automating those processes so, in addition to mining, our system can operate optimally.

It uses a three-axis binary system, instead of the typical two-axis binary system where you have 2 raised to 2,6,16,32 and up to 256. In the blockchain, the current base is 4, which means it uses 1,4,16 up to 256. By the end of the year, the base will be 8, making the processing even faster and more efficient, in line with the philosophy of reducing energy consumption. The economical rewards are also balanced with the pace of quantum computing to avoid inflation.

Therefore, our process does not depend on human input and operates on quantum computing. Our core is not limited to running on specific operating systems; our operating system is compatible with Windows, Linux, and Apple IOS and with any Cold wallet.

### **COLD WALLET**

An offline, safe cryptocurrency wallet called a "cold wallet" often saves your private keys on a physical device. It is also known as a hardware wallet, and it works by using a flash drive-like device that is not linked to the Internet to safeguard your digital cryptocurrency holdings from hackers.

Augreen tokens are directly connected to the fund, therefore owning tokens equals owning shares of the fund. Below there are numerical representations of token to quota ratios, as well as illustrated projections for the pricing of the tokens.

Regarding the purchase on the primary market, ForestAu Green requires all transactions to be conducted through our official website, [www.forestaugreen.com](http://www.forestaugreen.com). This is a crucial step in ensuring the security and legitimacy of your purchase.

ForestAu dividends will be shared only with primary market wallets that currently detain the tokens, which means the secondary market does not receive dividends, and investors who bought and sold all tokens acquired on the primary market will not be eligible to receive it either.

It's essential to exercise caution when making purchases online, especially when it comes to products that may be subject to counterfeit or fraudulent activity. By using the ForestAu Green website, you can minimize these risks and enjoy a safe and satisfactory experience.

**Total fundraising: \$20.6B**

**Each quota = \$1.60**

Minimum investment in direct primary market investment fund= **\$160k\***

**Initial token value = \$0.016 in the first round**

**Total Supply = 1,287,500,000,000**

**One quota = 100 tokens in the first round**

**$20.6 \div 1.6 = 12,875,000,000$  shares**

**Rounds:**

1st round: Token value = \$0.016 Number of tokens = 4.2b	2nd round: Token value = \$0.04 Number of tokens = 3.8b	3rd round: Token value = \$0.12 Number of tokens = 3.4b	4th round: Token value = \$0.36 Number of tokens = 3b
5th round: Token value = \$1.08 Number of tokens = 2.6b	6th round: Token value = \$2.16 Number of tokens = 2b	7th round: Token value = \$6.48 Number of tokens = 1.2b	

**In the seventh round, the token will be allocated on the exchange, and we will have the first burn from 25% to 60% if necessary.**

It's important to note that ForestAu Green has no control over transactions made in the secondary market between private individuals. Therefore, any purchases made outside of the official ForestAu Green website, such as through private sales or online marketplaces, are not the responsibility of the company.

We advise investors aiming to purchase tokens from the secondary market to wait for the launch in an official exchange to avoid fraudulent schemes.

### **DISCLAIMER REQUIRED**

We emphasize that past results cannot be interpreted as a promise of future results and values, dates and conditions are subject to change. However, based on our market research and the growth potential of each investment, we have a roadmap for conducting investment rounds in harmony with the need for each project's funding, following the respective physical and financial schedules of each one.

We estimate that at the time of launch on the open market, the market value, supply, and demand will be able to maintain the stability of the token's real value, in contrast to the valuation of projects.

## DISCLAIMER, MARKET WARNINGS, AND LEGAL RISKS

Large-scale increases in the supply of forestry may affect forestry prices and reduce our revenues. Uninsured losses relating to the forestry farms we may own or may acquire can reduce our Token holders' returns. Harvesting our forestry may be subject to limitations that would negatively affect our results of operations. We face possible liability for environmental clean-up costs and wildlife protection laws related to the forestry farms we acquire, which would increase our costs, reduce our profitability and competitiveness against open market supply and demand, and could impact cash distributions to our Tupan AuGreen Token holders or the repurchase of the tokens. Our estimates of the forestry growth rates on our properties may be inaccurate, which would impair our ability to realize expected revenues from those properties. Changes in assessments, property tax rates, and state property tax laws may reduce our net income and our ability to make distributions to our Tupan AuGreen Token holders. The impacts of any climate-related legislation or regulation remain uncertain at this time. Changes in energy and fuel costs could affect our financial condition and the results of operations. Actions of joint venture partners could negatively impact our performance. We will be subject to changes in global market trends that could adversely affect our results. We intend to acquire interests, directly or through subsidiaries or affiliates, in global operations that have synergy with our core business and our investment theses. These non-U.S. investments could cause our business to be subject to unexpected, uncontrollable, and rapidly changing events and circumstances that may be experienced in the United States. Adverse changes in the following factors, among others, could harm our business, results of operations, and financial condition:

- Effects of exposure to a currency other than U.S. dollars, due to having non-U.S. customers and foreign operations;
- Potentially negative tax consequences and restrictions on the repatriation of earnings;
- Regulatory, social, political, labor, or economic conditions; and
- Trade protection laws, policies and measures, and other regulatory requirements affecting trade and investment, including loss or modification of tax and tariffs exemptions, and import and export licensing requirements.

Risks related to cryptocurrency and Tupan AuGreen Token's Risks Participation in blockchain-related offerings like the Token Issuer's Offering involves a high degree of risk. The tax treatment of Tupan AuGreen, the rights contained therein, and the Token distribution is uncertain and there may be negative consequences for Subscribers upon certain future events. We may incur liabilities that may exceed our available capital or resources. Our Token may not be widely adopted and may have limited users. Tupan AuGreen and/or the issuance of Tokens may constitute the issuance of a "Security" under U.S. Federal Securities Laws. The Offering may be subject to registration under the U.S. Securities Exchange Act of 1934 (the "Exchange Act") if the Token Issuer has assets above USD 10 million and more than 2,000 U.S. Subscribers participate in the offering. Tupan AuGreen Subscribers will have no control and we may only have limited control once the Tokens are delivered. There may be apparent and actual conflicts of interest. Subscribers may lack information. Tupan AuGreen has a limited history. If our Token protocol is unable to satisfy data protection, security, privacy, and other government- and/or industry-specific requirements, its growth could be harmed. Risks associated with the token issuer We are dependent upon the collective skill set of our management team. Failure to effectively manage our growth could negatively affect our business and operating results. We may incur unrecoverable legal costs. If we fail to comply with applicable government laws it could result in the suspension or termination of our ability to conduct business. You should seek out independent technical, legal, professional, tax, and financial advice. Our forecasts are reliant upon hypothetical assumptions and lack independent review. Risks associated with the industry we will participate in may adversely affect the value of the Tokens. We cannot forecast or predict the outcome of our activities. The transferability of rights will be restricted.

The Offering price and Subscription Amount are arbitrary and variable. We may require future capital to continue our operations. Market stagnation Because the public trade of Tupan AuGreen Tokens hasn't started yet, their sale might not be active and the market might not be liquid. This might increase the volatility of token prices. Despite the existence of working products that facilitate the sale of Tupan AuGreen Tokens and their exchange for other cryptocurrencies, an efficient and effective public market for Tupan AuGreen Tokens can stagnate. Furthermore, if the development of the market of liquid Tupan AuGreen Tokens has stagnated, their price may show large volatility, as Tupan AuGreen Tokens holders can experience problems with liquidity at some moment.

Tupan AuGreen is variably exposed to increases or decreases in cryptocurrency prices as a result of speculative trading risks Evaluation of cryptocurrency on the collateral or secondary market is usually non-transparent and highly speculative. Tupan AuGreen Tokens do not provide their owner any rights to own the fund's assets. The Tupan AuGreen Token's price can volatile significantly over a short period. There is an extreme risk that the Tupan AuGreen Token holder may lose the funds paid for the Tupan AuGreen Tokens. The worst scenario is when their value drops to zero. Tupan AuGreen Tokens can have a zero market price There are no predictions or guarantees relative to the movement of liquidity of Tupan AuGreen Tokens. The Tupan AuGreen platform is not responsible for the future market value of Tupan AuGreen Tokens, their liquidity, the speed of transfer, and the possibility of entering various markets. Tupan AuGreen Tokens can not be redeemed Besides the cases provided by the applicable law or legally mandatory documentation, Tupan AuGreen is not responsible for the redemption of Tupan AuGreen Tokens and the return of funds to their owners. There is no guarantee, and there will be no guarantee in the future, that Tupan AuGreen Tokens are valuable and useful. No promises can be given regarding the value of Tupan AuGreen Tokens, the prolongation of acceptance of payments, and similar actions. The return of the funds paid for Tupan AuGreen Tokens can be infeasible in cases when an appeal is made to a version of the laws and regulations different from the acceptable on the Tupan AuGreen platform. Holding Tupan AuGreen Tokens The custody of the cryptocurrencies or Tokens to be issued is not carried out by an entity authorized to provide investment services. The custody of cryptocurrencies or Tokens is based on what is known as distributed ledger technology or blockchain, a novel technology and not without risks, as described below. Risks associated with blockchain technology and software Risk of congestion of blockchain Many cases of blockchain transactions in which cryptocurrency transactions are used (e. g. Bitcoin or Ethereum) are subject to periodic congestion during which transactions can be postponed. Some people can occupy a local network environment with malicious intent to benefit or gain an advantage by purchasing cryptocurrency.

This can include a situation when the creators of blocks can delay or completely avoid adding the transaction of the buyer to the blockchain. Technical risks Investors are advised that the functionalities of the future Tupan AuGreen platform described in this White Paper are subject to change due to technical limitations. Risk of government intervention Tupan AuGreen is working in a new field of activity, which can be largely controlled and monitored by various agencies, including increased attention of law enforcement and investigation agencies. There is no guarantee that regulators will not undertake a detailed analysis of the operations done by Tupan AuGreen. There is also no guarantee that legal action will not be taken against Tupan AuGreen. These actions may include various penalties, fines, disapprovals, reprimands, and other punitive measures against Tupan AuGreen. Such retaliation may require Tupan AuGreen to reorganize its operations or reduce its offer of specific products and services. This can affect the reputation of Tupan AuGreen and lead to higher operating costs, which will negatively affect the Tupan AuGreen Tokens and Tupan AuGreen platform. Legal risks The legal status of cryptocurrency, tokens, blockchain technology, and digital assets in many jurisdictions is not defined and unclear. It is difficult to predict which public authorities will regulate such technologies. It is difficult to predict the likely changes and amendments to the laws governing this in general, and also the applications with blockchain technology, cryptographic tokens, and digital assets. These changes can have a pessimistic effect on Tupan AuGreen Tokens. Inability to maintain and receive licenses and permissions Since the date of the sale of Tupan AuGreen Tokens, there are no rules that require the company to receive the permissions and licenses necessary for this type of activity. There is a risk that such requirements can be introduced in the future and will affect the Tupan AuGreen platform. In this case, the business of Tupan AuGreen will be based on the urgency of these licenses and permissions and compliance with the relevant conditions on behalf of the Tupan AuGreen platform. The terms of receiving and renewal of licenses, as well as control over the licensee's compliance with these licenses by regulatory authorities may differ. These agencies may require Tupan AuGreen to comply with the following conditions: conditions of employment of qualified personnel; multiple standards; conditions of maintaining a certain technical level; consent to permitting to monitor our operations; standards of the system of quality control; level of service related requests; provision of relevant information at the request of licensing agencies. The realization of these requirements may result in financial contributions and significant time, as well as delays in the operation of the Tupan AuGreen platform. In addition, public and private persons have the right to comment on Tupan AuGreen and participate in the licensing process in other ways, including court appeals and political pressure. Tupan AuGreen can not extend or does not receive the required licenses. In addition, these licenses can limit the ability of Tupan AuGreen to perform its work on a commercial basis or to carry out its activities. Onerous contract risk due to compliance with regulations, laws, and standards Tupan AuGreen may not satisfy the applicable laws and regulations. It may also not recognize the results of relevant audits done by regulators. Another scenario is an increase in government regulation of operations done by Tupan AuGreen. All of these issues can entail significant additional costs, simply complicating the work or leading to numerous sanctions. The result is a negative impact on the business of Tupan AuGreen platform.

The property and activities of Tupan AuGreen are guided by various government agencies and authorities to comply with the applicable rules and regulations. These regulators have considerable freedom and power in law questions and their explanations. State agencies have the right to carry out periodic inspections to monitor the property and activities of Tupan AuGreen platform. Any such audit may conclude that Tupan AuGreen violates certain regulations or rules, or laws. Tupan AuGreen platform may not correct the violations or be unable to appeal those conclusions. Any mistake made by Tupan AuGreen in the field of compliance with the applicable regulations, laws, or results of supervision may result in penalties, fines, or more drastic requirements and sanctions. They may include the need to stop certain activities; they may even contain criminal and administrative charges against the relevant persons. Such decisions, sanctions, demands and tighter control of government regulation can increase the costs of Tupan AuGreen and have a very detrimental impact on its platform and its business as a whole. Other Risks Tupan AuGreen platform has not been rated by any credit rating agency.
